HUMANITARIAN PROJECT MANAGEMENT OPEN SOURCE SOFTWARE

See for yourself *and join us*

Collective

An inclusive and collaborative approach

Sigmah is coordinated by a group of humanitarian actors who form a Steering Cooperative.

Expertise

An alliance of competencies

IT companies*, a software ergonomist, a graphic designer and independent developers are all involved in the development of Sigmah. This network of professionals and volunteers is led by Groupe URD** under the supervision of the Steering Cooperative.

* such as Betadriven which developed ActivityInfo, an indicator monitoring system, for UNICEF in Congo.

** Groupe URD developed the Dynamic COMPAS, the first ever Quality management software for humanitarian projects

Open source

An innovative economic model

As Sigmah has been designed as open source software, it is freely available and open to all. It is therefore available to the humanitarian community as a whole.

Evolving

A sustainable and evolving solution

Sigmah can be freely modified or adapted, the changes made being accessible to all. This continually evolving process, based on feedback from users and technical input from developers, ensures the sustainability of the project.

DO YOU…

…get submerged under all the Excel and Word documents which are exchanged within your organization and with your partners?

…struggle to keep a clear and up-to-date picture of the situation on all your organisation's projects?

…often find yourself trying to track down information which is scattered between too many different sources and which is difficult to find in its most up-to-date version?

…find it difficult to keep on top of everything that needs to be done because of the number and variety of projects which need to be followed up?

…regret not being able to use all the information that has been gathered more easily in order to learn lessons from the past?

…want to adopt a Quality approach?

SIGMAH CAN HELP

Sigmah, for easier and better project management.

The **Sigmah** software covers all your project management needs: writing reports using predefined formats, monitoring indicators and quality criteria, monitoring project progress and funding by zone and by operational sector. It includes a warning system and calendar to anticipate deadlines more effectively.

With **Sigmah**, data can be easily exchanged and shared between your teams at headquarters and in the field and all your projects are archived in a central database which is accessible via a simple web browser.

Sigmah is a comprehensive solution to help you manage the quality of your projects!
